

WORK EXPERIENCE

PUBLICATIONS

- Jun 2019 - present
CEO and Co-Founder, Kitapp
The start-up **Kitapp** is aiming to ease the process of buying and selling first and, especially, second-hand books, decreasing usage of paper materials and boosting green economy:
 - Being a pioneer in the formulation of the idea and its business model
 - While gathering the team, interview of developers and designers
 - Leading of the project, assignment of the tasks to team members
 - Supervision of used methods/algorithms for the development of web site/mobile app

<https://kitapp.az>
- Oct 2019 - Jun 2020
Academic Mentor, Dean's Mentoring Program for international students, Baku Higher Oil School
Mentoring Program for freshmen international students at Baku Higher Oil School:
 - Arranging after-class hours with mentees for the discussion of the topics related to **Calculus 1/Physics 1**
 - Keeping close contact with mentees to guide them in their academic and non-academic progress
- Sep 2018 - Dec 2018
Research Assistant, eiLink R&D Center
Performed various tasks that are interdisciplinary between *Machine Learning and Oil-Industry*:
 - Handled and worked on **terabytes** of seismic survey data
 - Learnt and implemented complex **Signal Transformation and Machine Learning methodologies**
 - Implemented theory using various programming languages (**Python, C++**)
 - Delivered monthly attained results to end-customers

EDUCATION

Sep 2016- Jun 2021
B.E. Process Automation
Baku Higher Oil School
Baku, Azerbaijan
CGPA: 85/100
www.bhos.edu.az/en

Feb 2020- Jun 2020
Erasmus+ Study Mobility Program
"Angel Kanchev" University of Ruse
Ruse, Bulgaria
SGPA: 98/100
www.uni-ruse.bg/en

Apr 2020

Optimizing the Structure of RBF Network by Using Clustering and Particle Swarm Optimization

Research work about the meta-heuristic and evolutionary algorithm, **Particle Swarm Optimization (PSO)**, which is used to optimize the structure of **Radial Basis Function Neural Network** by finding an optimum number of clusters and weight parameters:

- Fundamental understanding of the PSO algorithm based on theory of evolution - natural selection and emergent complexity phenomenons
- Implementation of the theory without any third-part library in C++
- Presentation of attained results to the conference professors

April 14-16, 2020 | 1st International Student Research and Science Conference on Process Automation And Information Security

Proceedings Journal, page 469

Apr 2019

Autonomous Driving using Deep Learning and Behavioral Cloning

Thesis about the development of **end-to-end Convolutional Neural Network (CNN)** model for autonomous driving and its implementation on a low-performance micro-computer, raspberry-pi powered prototype:

- **Design of circuit** of the prototype including choosing appropriate chips, drivers and their construction on an individually designed PCB
- **Establishment of SSH connection** between the car and computer for sending commands and data collection. Client and Server-side were developed in Python and C# respectively
- Due to performance issues, CNN hand-coded from scratch in raspberry-pi to avoid third party libraries to save memory

April 15-19, 2019 | 1st Republic Student Scientific Conferences, Baku Higher Oil School

Official Journal, page 256

LANGUAGE SKILLS

Mother tongue: Azerbaijani

English (IELTS: 8)

Listening: 8.5

Reading: 8.0

Writing: 7.0

Speaking: 8.0

Turkish

Listening: C1

Reading: C1

Writing: B2

Speaking: B2

HONOURS AND AWARDS

Apr 2019

1st-degree diploma, First National Students Scientific Conference

The thesis "*Autonomous Driving using Deep Learning and Behavioral Cloning*" was awarded the 1st - degree diploma among more than a hundred papers. To get more information about the thesis, please, refer to the **Publications** section.

Organizer: Baku Higher Oil School

Mar 2019

1st-degree diploma, International Cyber Security Week

With the presence of the 3-member team, an **Anomaly Detection** algorithm was developed to monitor the log file of the Apache2 server to detect possible intrusions:

- **One-Class Support Vector Machine** was used to detect outlying behaviours on the server
- Connection between Google Firebase server established and Android OS based application was developed to notify a person in charge in case of possible cyber attack
- Web application was developed to ease the monitoring process of

Organizer: Ministry of Transport, Communications and High Technologies

Dec 2018

2nd-degree diploma, Cansat Azerbaijan 2018

Regarding the competition requirements, a can-shaped system should be developed such that after deployment from 400 meters (1312 feet) parachute automatically would open to send telemetry to a ground station about the pressure, temperature, humidity, along with taken images. With the presence of the 4-member team:

- Circuitry and Hardware system were developed
- Regarding the requirement of the duration of staying in the air, physical features of a custom parachute were calculated
- **Hardware (Arduino/Raspberry-pi)** was coded, and the connection with a computer was established using the Xbee module
- For live monitoring purposes, **desktop and mobile applications** were developed using programming languages, *C# and Java*, respectively

Organizer: Azercosmos

Sep 2016

Golden High School Certificate and Golden Medal

Received an exceptional (129/87152 student) award of golden certificate for finishing **11-years of Primary/Middle/Secondary** Education with the grades all **"A"**, and being admitted to the university with the TQDK (Undergraduate Admission Exam) Score of **680/700** (0.3% of applicants).

Organizer: Ministry of Education Republic Azerbaijan

Dec 2015

Silver Medal, Competition of Talented Students

The competition was arranged among the academically distinguishing students of Azerbaijan. The questions and problems are closely related to Physics, Chemistry and Maths, and the difficulty level can be considered as advanced regarding the ages of competitors.

Organizer: Ministry of Youth and Sport of the Republic of Azerbaijan

Apr 2015

Bronze Medal, Azerbaijan Republic Science Olympiads

The Olympiad mentioned is one of the most respected competitions in the country, and winners sent to overseas countries to represent Azerbaijan. The competition consists of 3 main parts - Regional, City and Final stages. The year that I applied, 400 out of 22,000 students (2%) reached the final stage, and 45 of them were awarded the medals (Golden - 5, Silver - 15, Bronze - 25).

Organizer: Ministry of Education Republic Azerbaijan

PROJECTS

Oct 2020 - Present

Research Project "Detecting and Localizing Drones based on the Direction Of Arrival (DOA) of propeller sound to Microphone Array"

The ongoing research work is aiming to **detect** and then **localize** drones based on the *acoustic* features of their propeller sound:

- A literature review has been successfully completed
- For detection purposes, several Machine Learning models (*Radial Basis Network, Support Vector Machine, Long Short-Term Memory, Convolutional Neural Network*) have been tested in terms of both accuracy and computational cost

ACTIVITIES

Software Engineering

Solid hands-on experience in the development of **Android (Java)** and **Windows Form (C#)** applications
